

# CAR SHOCK ABSORBERS

CATALOGUE 2019 - 2020

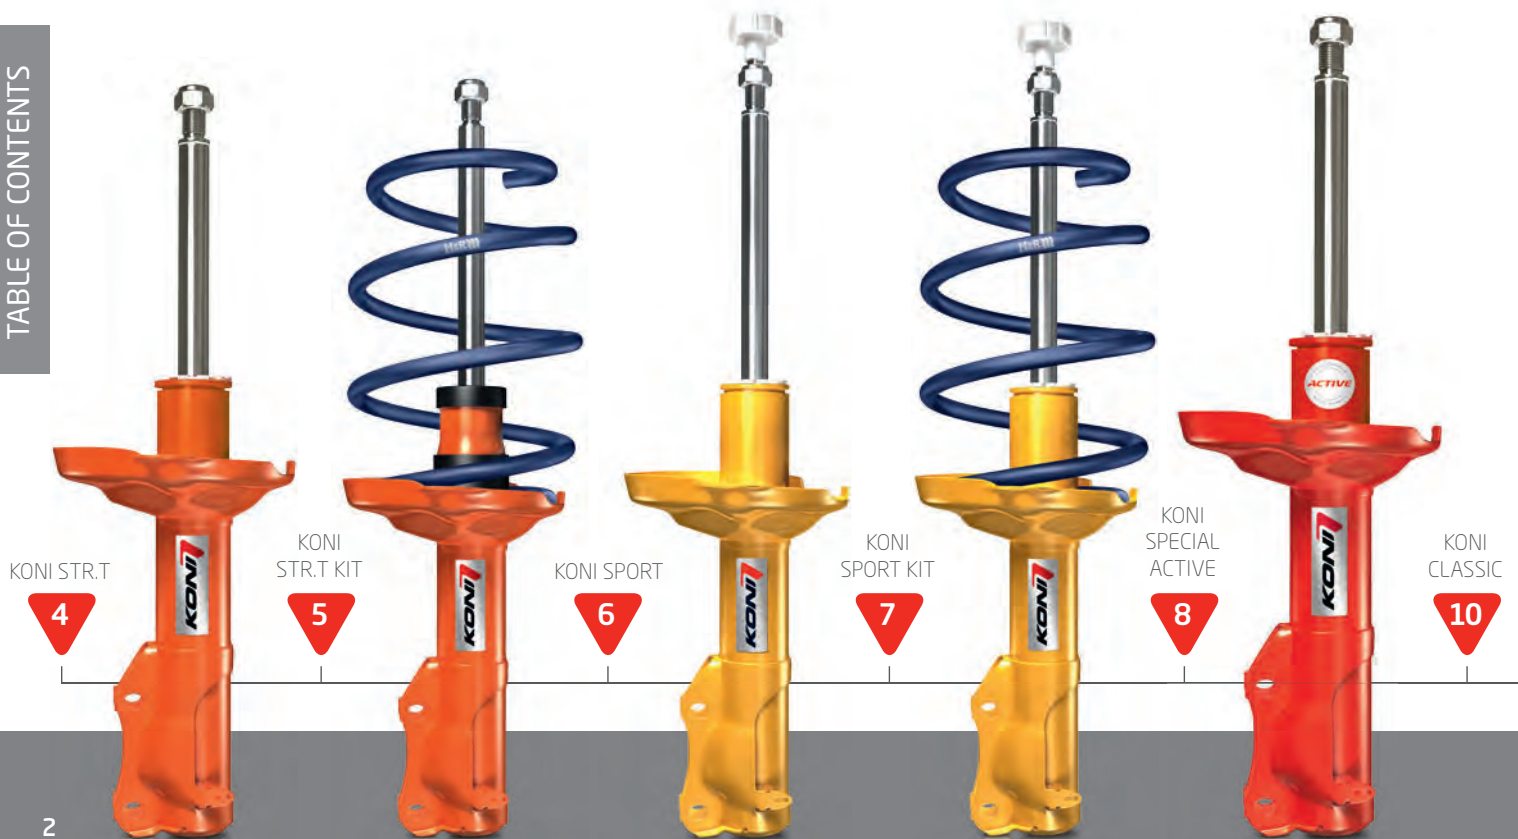

# KONI CAR SHOCK ABSORBER PROGRAM

Welcome to KONI, one of the world's leading manufacturers of shock absorbers. This catalogue gives an overview of the many possibilities for customization and personalization of your car. Ever since 1955, KONI has held a prominent position in motor sports with its range of state-of-the-art shock absorbers and sport kits. All rely on KONI's longstanding experience!

# STR.T

## TUNED PERFORMANCE DAMPING AFFORDABLY PRICED

- Entry-Level Performance Shocks and Struts
- Product Complements Stock or Performance Lowering Springs
- Perfect for OE Replacement or Vehicle Improvement
- Non-Adjustable Damping

KONI's entry-level performance STR.T (pronounced "street") shocks and struts bring improved handling and KONI quality to the budget-minded driving enthusiast. Whether to simply refresh and upgrade a stock vehicle, or to match with street performance lowering springs and other modifications, KONI STR.T provides performance at a value price point.

STR.T Damping Force Comparison

# STR.T KIT

---

## PERFORMANCE LOWERING & HANDLING UPGRADE ONE PURCHASE, ONE INSTALLATION

- Perfectly Tuned Chassis / 100% Performance
- Excellent Handling
- Lowering up to 40mm with H&R spring
- Perfect Match
- 100% Street Legal

The STR.T Kit from KONI comprises KONI STR.T shock absorbers and custom-made lowering springs from the company H&R. KONI's STR.T shock absorbers give you perfect road holding, optimum handling and breathtaking forces. Thanks to the extremely high reaction speeds of the shock absorbers, drivers can totally rely on their equipment, even in precarious or demanding situations.

# SPORT

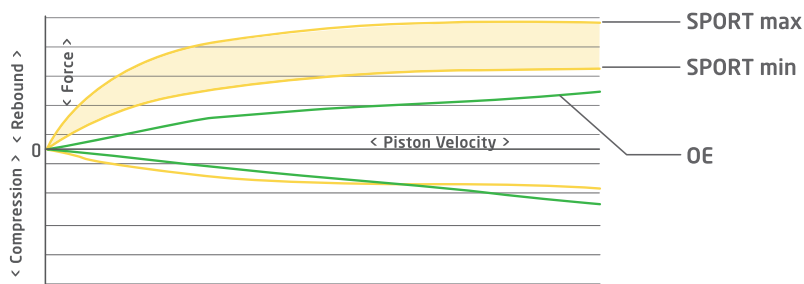

LEGENDARY HANDLING CONTROL  
EXTERNAL REBOUND DAMPING ADJUSTMENT ON MOST CARS

- Streetable Ride Quality and Corner Carving Handling Control
- Excellent Choice for Multi-Use Cars (Street, Track, etc.)
- Best KONI Shock for All Performance Lowering Springs
- Double Adjustable and Race Valved Versions Available for Key Applications

KONI Sport struts and shocks are the industry leader for user-adjustable damping for daily drivers to weekend warriors. For decades, KONI Sport's familiar yellow color has meant superior motion control and adjustability for the discerning driving enthusiast.

SPORT Damping Force Comparison

## SPORT KIT

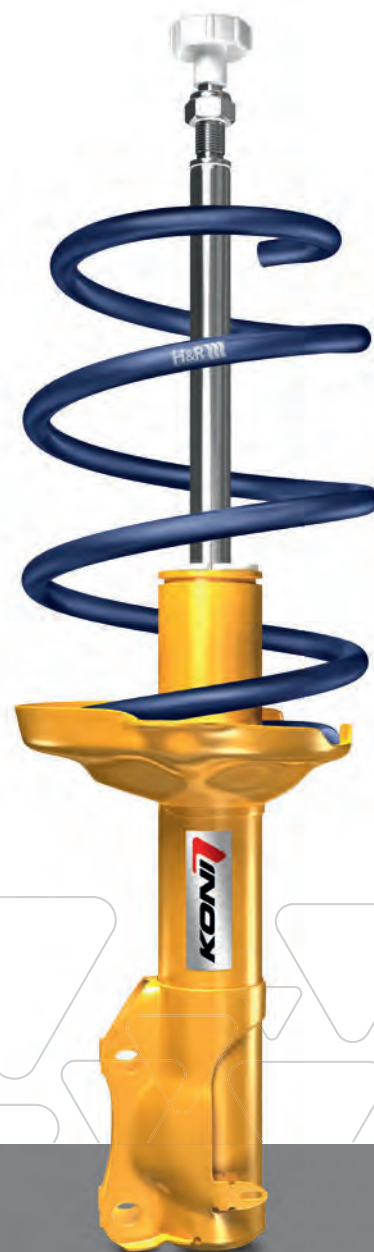

---

### MATCHED ADJUSTABLE DAMPERS & LOWERING SPRINGS PERFORMANCE SUSPENSION EXCELLENCE IN ONE BOX

- Optimized Street or Track Performance
- Aggressive Roadholding and Improved Safety
- Engineered Kits for Specific Vehicle Applications
- Complete shocks kit consisting of four KONI high-performance car shock absorbers and matching lowering springs.

Are you a tuner? Do you like high speed? Are you impressed by professional skills and a dynamic sporting driving style? Then we have the right tool for you!

Our Sport shocks kit provides the ultimate shock absorber technology by KONI. This means that you can have even better roadholding, less chassis movement and performance support without limits. Show what you've got and experience the unique driving dynamics with optimum safety!

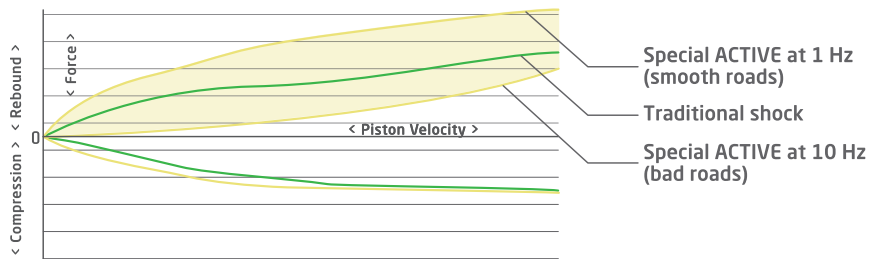

# SPECIAL ACTIVE

JUST AS A CHAMELEON ADAPTS TO ITS ENVIRONMENT, KONI SPECIAL ACTIVE TRANSFORMS TO SUIT VARIOUS ROAD CONDITIONS, INSTINCTIVELY.

KONI Special ACTIVE is the next generation of premium shock absorbers that offer superior handling without compromise. It is the latest advancement in the KONI product portfolio. Utilizing the most recent generation of KONI's patented Frequency Selective Damping technology, it controls large body motions and cornering forces but smooths expansion joints and rough roads for improved comfort.

Special ACTIVE Damping Range

# IMPROVE HANDLING WITHOUT COMPROMISING COMFORT

---

- Special Active Applications Utilize Koni's Latest Generation of Frequency Selective Damping Technology
- Improves Safety and Road Holding
- Technology Proven on Over 1.5 Million Factory Equipped Vehicles
- Secure and Stable Feeling for Spirited Driving
- Unrivaled Aftermarket Solution can be Fitted to Most New and Older Cars
- Driving Refinement for Cars, Trucks, SUVs, etc.
- Technology that Rivals Expensive Original Equipment Electronic Systems
- Performance for Driver and Comfort for Passengers in One

## SPECIAL & CLASSIC

IMPROVED RIDE AND HANDLING PERFORMANCE  
REBOUND DAMPING ADJUSTABLE

- The Shocks That Earned KONI's World-Class Reputation
- Red (Special), Black or Red with KONI Winged Logo (Classic)
- Broad Application Range Including Older Performance Cars
- Use for Replacement and Vehicle Upgrade

KONI Special and Classic shock absorbers are available for many older performance cars. KONI selects the most appropriate damper technology and develops every shock absorber specifically for each application to bring out the best possible ride and handling. KONI Special and Classic continue to be the industry standard for older performance cars.

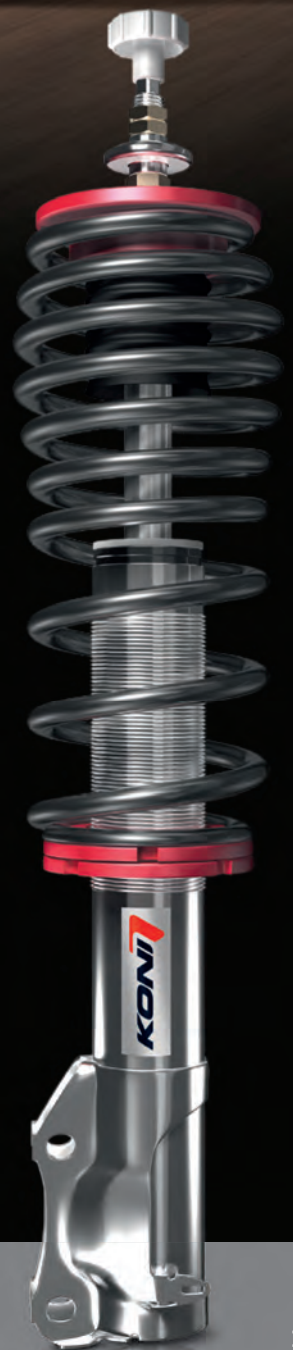

# COIL-OVER KITS

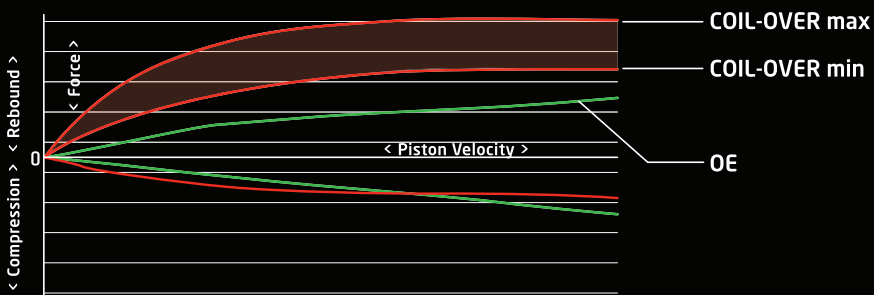

## RIDE HEIGHT AND REBOUND ADJUSTABLE TUNED PROGRESSIVE SPRINGS

- Threaded Bodies Offer 25-65mm Lowering Range
- Lowering can be Corner-Specific for Weight Jacking and Corner Balancing
- External Rebound Damping Adjustment on Most Cars
- Plated Shock Bodies, Grey Metallic Springs, and Red Anodized Spring Seats

KONI Coil-Over kits match the world-class KONI Sport adjustable valving with progressive lowering springs, ride height adjustable perches, and threaded bodies. Each application is specifically tailored to provide great handling and a large ride height adjustment range with a good streetable ride quality.

**COIL-OVER Damping and Force Comparison**

# KONI | H&R TRACK DAY KIT

---

## F1 TECHNOLOGY TAKES YOU TO THE LIMIT

- Aluminum Top Mount with Scalable Camber Adjustment
- Fully Independent Rebound and Bump Adjustability
- No Need for a Remote Reservoir

In the early 90's KONI introduced a new damper technology in Formula 1, which has since been used in many other race classes. This technology is still being used today in F2, GP3, Formula 3 and many other GT Series. KONI is now introducing this F1 technology in the KONI | H&R TRACK DAY KIT: perfect for track days as well as for fast road use.

When deciding which strut design to be used for the TrackDay kit suspension, KONI has chosen the up-side-down configuration of a mono tube damper. This configuration allows a very high side load, combined with a very solid damper setup; a must when it comes to real race dampers. The KONI mono tube dampers offer eight adjustment positions in both rebound as well as bump, which are all easily adjustable and felt by distinct stops, or clicks, to assure that each port in the valve preloaded port system can only be either open or closed. Each of these positions will give a noticeable and repeatable damper curve change. The wide adjustment range gives you the option to tune your car to the maximum setup for both road as well as track day use in a matter of seconds!

# HEAVY TRACK & RAID

## ROBUST CONSTRUCTION

## IMPROVED ROAD HOLDING

- KONI Special Technology, Up-Sized for Light Trucks and SUVs
- RAID: Extreme Durability Proven in The World's Toughest Conditions
- Heavy Track: Improved Handling and Ride for Big Vehicles
- Mono-Tube or Twin-Tube Design Based on Application
- Made in KONI factories with KONI Quality standards

KONI RAID and Heavy Track are specially developed for the on-road and off-road challenges of Light Trucks, 4x4s, and SUVs. Tested and used under the world's most extreme conditions, these KONI dampers satisfy the highest demands regarding safety, stability and road holding grip. For many years, KONI RAID shocks have been the damper of choice for many Dakar Rally racers and support vehicles in Africa and South America where performance, strength and safety are paramount. KONI RAID shocks served their duty on BBC TV's Top Gear North Pole Special and driving up an Icelandic volcano. African Jungle or Urban Jungle, KONI RAID and Heavy Track are ready for the challenge.

# ADJUSTMENT PROCEDURES

## SERIES 26, 30\*

1. Move the dust cover and the plastic or metal cover on the end of the damper body to expose the adjusting button (Figure 1).
2. Hold the damper body securely in one hand near where the piston rod emerges from the body or use a vise/clamp carefully only at the lower attachment only. With the damper fully extended, press and hold the adjuster button with one finger while turning the piston rod with your other hand (Figure 2).
3. The adjusting device has been provided with a number of clearly distinguishable stops (clicks), each of which marks an adjustment position for 26 series (zero + 2 clicks = 3 positions) and 30 series (zero + 3 clicks = 4 positions) (Figure 3).
4. Prior to making a new adjustment, confirm if the damper is in the zero position or has been adjusted previously by turning the piston rod to the left (counter clockwise) until the zero-stop is felt. **DO NOT USE FORCE** or adjuster damage may occur.
5. To increase rebound, turn the piston rod one or more clicks to the right (clockwise), and release the adjusting button.
6. Be sure the adjusting button fully springs back into position. As long as the button is depressed, do not turn the piston rod further; otherwise correct adjustment will be disturbed. As soon as the button has made its complete return, the piston rod may be turned freely. The damper can now be refitted.

*NOTE: 26 Series range limited to 2 clicks, 30 Series range limited to 3 clicks.*

Figure 1

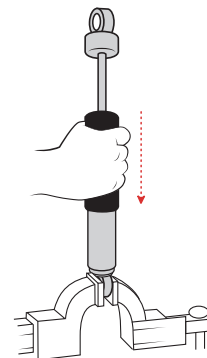

Figure 2

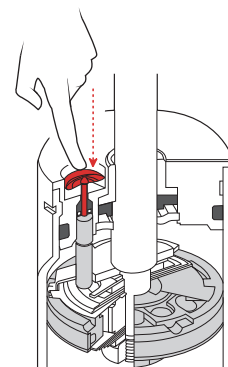

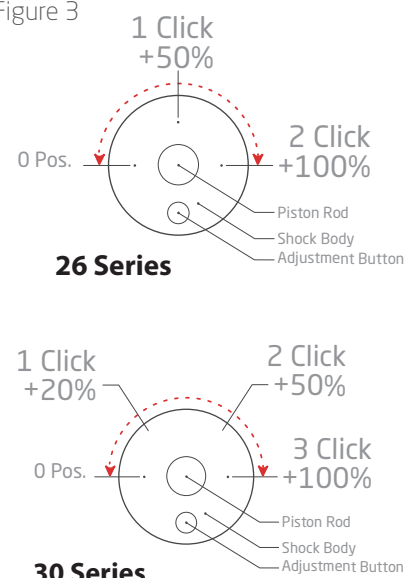

Figure 3

# ADJUSTMENT PROCEDURES

## SERIES 80, 82, 86, 87, 88, 90, 8040, 8240\*

1. Remove the shock absorber from the vehicle and hold it vertically with the lower eye or pin attached in a vise. Use clamp plates to prevent damage.
2. Fully collapse the shock absorber, at the same time turning the dust cap or piston rod slowly to the left (counterclockwise), until it is felt that the cams of the adjustment nut engage in the recesses of the foot valve assembly (Figure 4).

\* Some shock absorbers include a bump rubber concealed under the dust cover and it must be removed prior to adjusting.

4. The damper may have already been adjusted. Therefore check whether the shock absorber is in the adjustment position or not by keeping it collapsed and gently turning it further to the left counting at the same time the half turns until a stop is felt. Stop turning then and do not use force.
5. Keeping the shock absorber collapsed, make 1 half turn (180 degrees) to the right (clockwise). In case of prior adjustment add the number of half the turns previously found. The total range is about 4-5 half turns, we suggest the MAX crank of 4 (Figure 5).
6. Pull the shock absorber out vertically without turning for at least 1 cm to disengage the adjusting mechanism. The dust cap or piston rod may now be turned freely.

## SERIES 3013, 8010, 8041, 8210, 8241, 8610, 8641, 8710, 8741

1. Almost all KONI externally adjustable dampers are quickly and easily adjusted by placing a KONI knob on the adjuster tab that sticks out of the top mounting threading. As shown on the knob, turn counter clockwise for firmer, clockwise for softer (Figure 5).
2. Some externally adjustable shocks use an adjuster window instead of a tab. Insert a pin through the window into a hole, sweeping from left to right for firmer, right to left for softer.

### \*WARNING:

Adjust both left and right dampers identically. Failure to do so may lead to unstable handling and uneven tire tread wear.

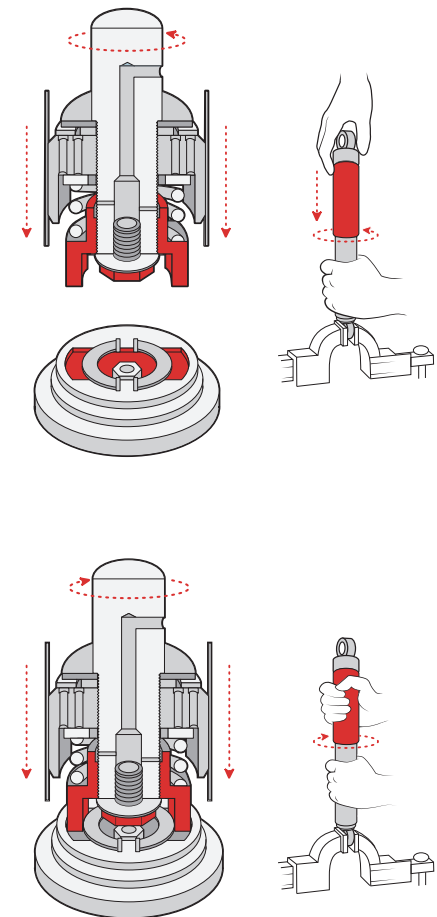

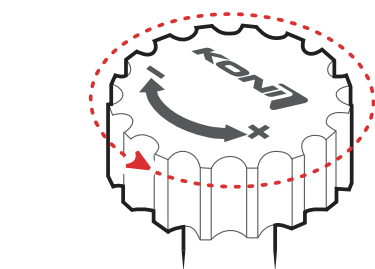

Figure 5

# MISCELLANEOUS INFORMATION

## ORDER NUMBERS EXPLANATION

The given numbers help to find the right shock absorber types. The part number consists of a construction group number referring to the type of construction of the shock, and a reference number referring to the shocks application.

In some cases the reference number contains an "L" or "R" (Left or Right side). Yellow shock absorbers have the extension "SPORT". Specially built shocks have different extensions, for example "SP", or "SPD," or "SPA" and "SPX" (4WD). The numbers on the right refer to a yellow complete McPherson strut, twin-tube with low-pressure gas, sport version, construction Type 8741. In this case for a BMW E36, front axle, left. The rebound damping is externally adjustable.

**Example Order Number:**

8741	1272L	Sport

# MISCELLANEOUS INFORMATION

## ATTACHMENTS KONI HEAVY TRACK & RAID

Due to the build quality and endurance a KONI HEAVY TRACK or KONI RAID shock absorber may outlive its attachment rubbers and bushings.

Replacement parts are available, please contact your KONI reseller or distributor for details.

## SPORT SHORT

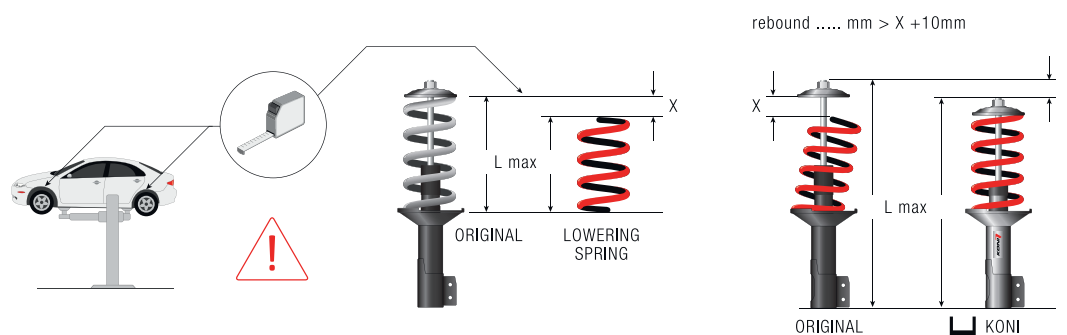

When do you need a shock absorber with shortened stroke? If a damper with shortened stroke is needed, please contact your KONI reseller or distributor for possibilities.

- N2 bottom groove 10 mm lower
- N3 bottom groove 15 mm lower
- N4 bottom groove 20 mm lower
- N5 bottom groove 25 mm lower
- N6 bottom groove 30 mm lower

- ③  Top groove is standard
- P1 bottom groove 5 mm lower
- P2 bottom groove 6 mm lower
- P3 bottom groove 7 mm lower

- ③  Middle groove is standard
- R1 top/bottom groove each on 6 mm distance
- R2 top/bottom groove each on 10 mm distance
- R3 top/bottom groove each on 15 mm distance
- R4 top/bottom groove each on 20 mm distance
- R5 top/bottom groove each on 25 mm distance
- R6 top groove 25 mm higher
- R7 bottom groove 15 mm lower

## Note for BMW 3-series E30 up to August 1988 with "M-Technik"

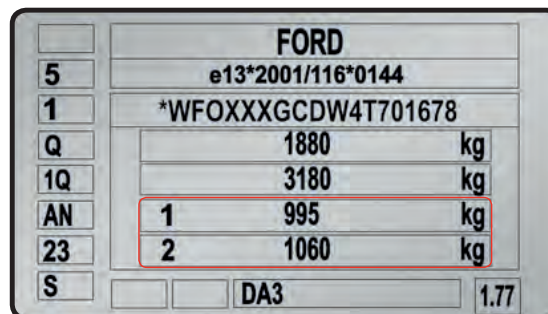

If equipped with "M" sportpack (Bilstein), the following original parts are required to fit the KONI insert: Bumpstop part no. 31-331-124-449, Dustcover part no. 31-331-134-314 (31-331-124-510), Locking nut part no. 31-321-115-398 (McPherson housing Ø 45 mm) or Locking nut part no. 31-321-117-376 (McPherson housing Ø 51 mm).

## Axle loads

In order to choose the correct KONI STR.T KIT or KONI SPORT KIT with the correct characteristics and amount of lowering for your vehicle, maximum axle loads as indicated by the vehicle manufacturer may be of importance. Maximum axle loads are in some countries mentioned on the vehicle documents, but can also be found in the car itself. Every vehicle carries a vehicle identification plate (metal plate or sticker), usually located in the engine compartment or on a door sill. Various information and weights are shown, needed are the fields marked with "1" and "2":

1 - Maximum front axle load

2 - Maximum rear axle load

## Important kit notes

- 1 The amount of lowering will be reduced on vehicles fitted with Original Sport Suspension /OEM
- 2 The lowering of the front axle depends on the vehicle specification and weight of the engine.
- 3 For fine tuning, please refer to the original Daimler Benz spring isolators available in different heights (8-23mm).
- 4 A TÜV certificate is necessary despite ABE for vehicles with a 'load dependant' brake power distributor.
- 5 Sedan without self-leveling, Estate/Station Wagon/Combi with self-leveling.
- 6 Additional lowering may occur on vehicles equipped with automatic transmissions.
- 7 Not for Station Wagons/Combi/Estates
- 8 Up to 8.79 please use spring seat no. 171412341A.
- 9 Excludes 4-wheel drive
- 10 As of 9.94 original Volkswagen springs seats might be necessary: 1H0412341 (big) or 357412341 A (small).
- 11 Not suitable for Serial/Original Sport Suspension (OEM)
- 12 Front springs only, torsion bars on the rear axle.
- 13 All wheel/tire combinations are allowed which have been approved by the ABE or other certified Wheel Testing Institutes (Germany, Austria, Switzerland).
- 14 If RH drive shaft diameter is bigger than 42 mm and when lowering 40 mm or more, the RH driveshaft may foul the anti-roll bar. If so you will need to fit a modified anti-roll bar or a longer steering rod from your VW/Audi dealer.
- 15 Excludes self-leveling.
- 16 Front & rear dampers are externally adjustable
- 17 Front dampers are externally adjustable
- 18 Rear dampers are externally adjustable
- 19 Rear dampers must be removed from car before they can be adjusted
- 20 excl. Cooper "S"
- 21 Front: threaded housing with adjustable spring seat
- 22 Rear: threaded housing with adjustable spring seat
- 23 Rear: ride height adjustable (adapter)
- 24 Rear: not ride height adjustable
- 25 With cars up to 5.92 the upper attachment must be replaced by BMW part number 31.331.090.467
- 26 Will be discontinued when current stock is depleted
